

What are you really getting in your nutritional supplement?

● Unhealthy fillers and not much more?

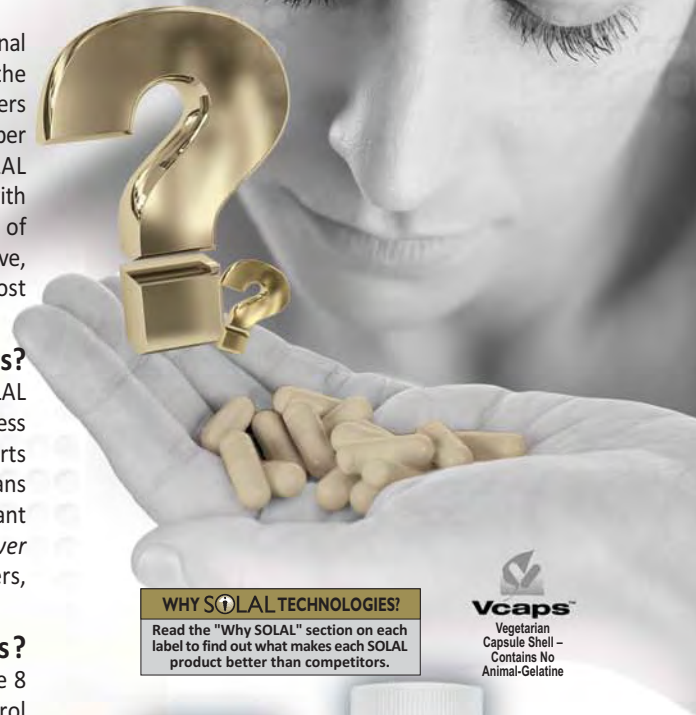

All capsules hold approximately 500mg of powder. Yet most multivitamin and nutritional supplements seldom contain more than 100mg of active components. Therefore the leftover space of approximately 400mg is filled with cheap and often less-healthy fillers like lactose, starch and carbonates. This is because fillers are hundreds of times cheaper than active ingredients. The result is an ineffective product. Most of SOLAL TECHNOLOGIES' capsules do not contain fillers because they are filled to the brim with active ingredients. In the few cases where a filler is needed, only small amounts of natural plant fibre are used. This makes SOLAL TECHNOLOGIES capsules more expensive, but effective. In fact, SOLAL TECHNOLOGIES is the natural medicines company most prescribed by doctors and most recommended by pharmacists.

● Ineffective weak plant powders - not concentrated plant extracts?

Most products use dried plant or food powders as their active ingredients. SOLAL TECHNOLOGIES uses only plant and food extracts. Extracts contain the same goodness as plant and food powders, except that, in the case of extracts, all the woody parts are removed and therefore extracts are 10-50 times more concentrated. This means that one capsule of extract supplies the same amount as 10-50 capsules of dried plant or food powder. Clinical studies that show effectiveness always use extracts, *never* dried plant or food powders. If you are using cheap products that contain powders, not extracts, it is no wonder your supplement is not working.

● Poorly absorbed, less effective forms of nutrients?

All vitamins, minerals and nutrients come in many forms. For example, there are 8 forms of vitamin E. The 2 heart protective forms are known as gamma-tocopherol and gamma-tocotrienol. SOLAL TECHNOLOGIES is the only company to use these two forms of vitamin E. Other companies use the alpha-tocopherol form, which although having anti-oxidant effects, does not protect the heart. Similarly our vitamin C contains both the fat and water soluble forms. You need both of these to protect the fatty areas of the body (like the brain and cells), as well as the watery areas (like the blood). Most other products contain only one type of vitamin C (the water soluble form). We use the glycinate form of calcium, which is the most absorbable and effective form, not the poorly absorbed carbonate form. The type of vitamin B12 we use is called *methylcobalamin*. This is unlike other companies who use the *cyanocobalamin* form, which breaks down into cyanide in the body. Our omega 3 fats are filtered and mercury-free. They contain the highest amounts of omega 3's because they are sourced from wild fish, not farmed fish (which have much lower omega 3 content). Our minerals are the chelated forms, the most natural and absorbable forms of minerals known. SOLAL TECHNOLOGIES is the only company in South Africa to use the Ubiquinol form of co-enzyme Q10. Others use the ubiquinone form with is 8 times less absorbed. These are just examples of the SOLAL TECHNOLOGIES difference, but it applies to our entire range of over 200 products.

WHY SOLAL TECHNOLOGIES?
Read the "Why SOLAL" section on each label to find out what makes each SOLAL product better than competitors.

vcaps
Vegetarian Capsule Shell - Contains No Animal-Gelatine

SOLAL TECHNOLOGIES
PRESCRIBED BY DOCTORS
RECOMMENDED BY PHARMACISTS™

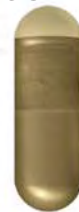

OTHER SUPPLEMENTS

Lactose & starch fillers

Weak plant or food powders & active components in low amounts

SOLAL TECHNOLOGIES

Natural plant fibre filler

Concentrated plant or food extracts & active components in effective amounts

Effective doses of the most absorbable and safest forms of nutrients and plant extracts.

Available from Dis-Chem Pharmacies without prescription
