

MEDICINE FOR THE SKIN™

• SKINCARE PROFESSIONALS RANGE •

GLYCOPEPTIDE ANTI-AGING FACIAL COMPLEX™

-with Marine Algae Phytoextract (MAP™)
Tripeptide, Hexapeptides & Copper-GHK™

- Reverses wrinkles & fine lines
- Boosts collagen and Restructures skin
- Protects, Strengthens and Hydrates

AVAILABLE FROM SKINCARE PROFESSIONALS

What is Glycopeptide Anti-Aging Facial Complex™

Glycopeptide Anti-Aging Facial Complex™ is a scientifically researched skin restructuring facial cream. It contains marine glyconutrients & patented bio-engineered protein molecules called peptides (tripeptides, hexapeptide and copper-GHK™ peptide), proven to visibly reverse skin aging. However, Glycopeptide Anti-Aging Facial Complex™ does more than reverse only visible aging. It also reverses the underlying causes of skin aging and regenerates the structural skin collagen-matrix, resulting in a truly more youthful and healthier skin. Glycopeptide Anti-Aging Facial Complex™ is more than a cosmetic. It is medicine for the skin.

Directions for use:

Apply 1-2ml (2-4 pumps) to facial and neck area twice daily after cleansing the face. Glycopeptide Anti-Aging Facial Complex™ is highly moisturising, so there is normally no need to apply additional moisturisers. Glycopeptide Anti-Aging Facial Complex™ has no sunscreen protection factors since these interfere with the absorption if applied at the same time. If desired, a sun protection factor cream can be applied anytime after 1 minute after the application of Glycopeptide Anti-Aging Facial Complex™. This cream, can be used in conjunction with other products in the SOLAL range.

Composition and Storage:

Aqua, Isopropyl myristate, GTCC, GMSE, MAP™ (Marine Algae Phytoextract), Hexapeptide, Tripeptide-1, Tripeptide-10, Copper-GHK peptide, Molecular Film, Glycerine, Hydrolysed keratin, Silicone, Hyaluronic acid, Cetearyl alcohol, Vegetable wax (paraffin-free), phenoxyethanol, ethylhexylglycerine, BHT (antioxidant).
Contains no paraffin, mineral oil, propylene glycol, sodium lauryl sulphate or paraben preservatives.

Store in a dark and dry place, below 25°C.

Benefits of Glycopeptide Anti-Aging Facial Complex™:

- Reverses wrinkles & fine lines
- Repairs & restructures
- Tones, nourishes & rehydrates

What does Glycopeptide Anti-Aging Facial Complex™ contain?

5 unique glyconutrient peptides:

1 MAP

2 Hexapeptide

3 Tripeptide-1

4 Tripeptide-10

5 Copper-GHK™

1

MAP (Marine Algae Phytoextract), is a skin restructuring, moisturising & anti-wrinkle marine glyconutrient, extracted and fermented from a species of sea-algae (*Pseudoalteromonas Antartica*) found only in the ice-cold pure waters of the Antarctic sea.

Studies show that MAP regenerates the skin by promoting fibroblast adhesion and keratinocyte growth. It restructures the skin by stimulating the production of elastin and collagen (types I & IV), thereby reducing the depth of wrinkles, especially in the forehead and around the eyes. It also protects the skin and prevents skin dryness.

2

Hexapeptide prevents the formation of new wrinkles and fine lines by reducing the contraction of micro-muscles in the face that cause and entrench wrinkles, especially around the forehead and eyes.

3

Tripeptide-1 and **Tripeptide-10** restore a youthful appearance to the skin by boosting new collagen growth, thereby improving skin structure, tone and firmness.

4

During the aging process the synthesis of collagen fibrils is reduced, and existing collagen is weakened and destroyed by enzymes. This results in skin-sagging & wrinkles. Tripeptides 1&10 act on all three stages of the collagen life-cycle to boost type I, III & IV collagen.

5

Copper-GHK™ increases the production of a host of skin components, including collagen, elastin, proteoglycans and glycosaminoglycans. Other important effects include the ability to regulate the growth of skin cells, significant anti-inflammatory action and the ability to prevent the release of oxidation-promoting iron into the tissues. The net result of these effects is rapid growth of youthful skin cells, thereby, not only reversing wrinkles, but reversing skin sagging too.

How Tripeptide-1 & Tripeptide-10 works:

- A trifunctional approach for comprehensive collagen treatment

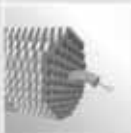

1.

Boosts collagen synthesis

2.

Makes fibril diameters and spacing more uniform

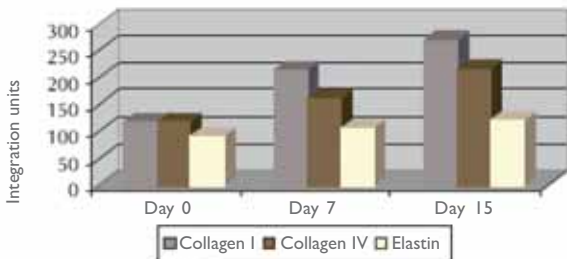

3.

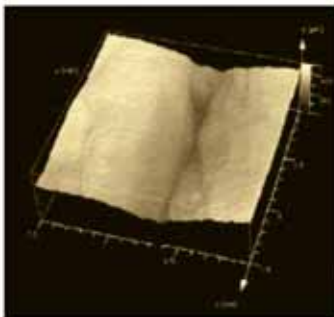

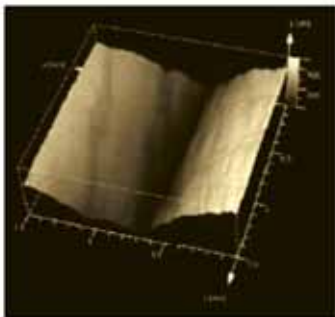

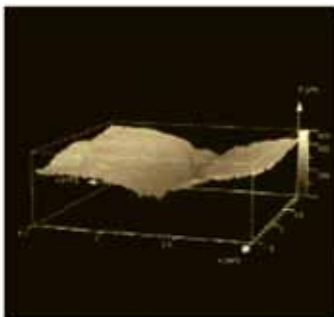

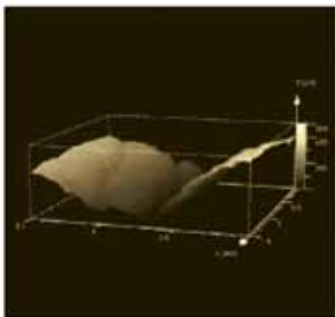

Inhibits enzymatic destruction

Skin restructuring tests show:

- Collagen I increases 128% in 15 days
- Collagen IV increases 81% in 15 days
- Elastin levels increase 31% in 15 days

Wrinkle depth reduction of 50-60%:

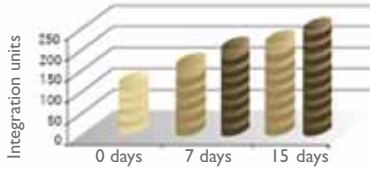

Wrinkle depth before

Wrinkle depth after 15 days

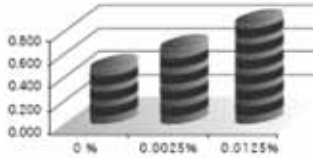

Collagen Boosting effects:

- Increases Collagen types I & IV synthesis

- Control
- Levels of Collagen IV
- Levels of Collagen I

- Increases Collagen type III synthesis

128% increase of Collagen I synthesis after 15 days

Type 1 collagen fibrils have a great tensile strength and elastic resistance

81% increase of collagen IV synthesis after 15 days

Type IV collagen is the most abundant structural component of basement membranes

Collagen III production tripled

Youthful skin contains a predominance of collagen III, but during the aging process, cells gradually lose their ability to produce this type of collagen.

Manufactured by SOLAL Technologies
Compounding Pharmacy of South Africa

Registered with the South African Pharmacy Council
