

One in 29 women will get breast cancer

This risk is even higher if anybody in your family has had breast cancer, or if you are on hormone replacement therapy (HRT), or if you use an oral contraceptive. Some types of plastics, known as polycarbonate plastics (contained in the resin that lines the inside of tinned foods), contain a chemical called bisphenol-A (BPA), which also increases the risk of breast cancer. Being overweight, drinking alcohol and not exercising regularly also increase risk.

THERE ARE NO PRESCRIPTION MEDICINES THAT CAN REDUCE YOUR RISK OF DEVELOPING BREAST CANCER BEYOND FIVE YEARS.

Chemotherapy and hormone blockers are useful once you already have breast cancer. Sometimes they are also used to prevent breast cancer in women who are at high risk. However, they can have terrible side effects, such as blood clots and strokes, and can cause uterine or endometrial cancer. They can also be toxic to the body and can't be used for longer than five years. There is no prescription medicine you can take to reduce your risk of getting cancer in the long term.

THERE ARE NUTRIENTS AND PLANT EXTRACTS THAT CAN REDUCE YOUR RISK OF DEVELOPING BREAST CANCER, AND ARE HEALTHY FOR YOU AT THE SAME TIME.

Unlike prescription medicines, there are natural extracts that reduce the risk of breast cancer and help maintain healthy breast tissue in women. Furthermore these plant extracts and nutrients have additional health benefits, unlike prescription medicines, which have additional side effects.

Breast Protection Formula™

Breast Protection Formula™ contains these nutrients and plant extracts that help prevent breast cancer:

Calcium-d-glucarate and broccoli extracts help the body excrete cancerous toxins such as BPA from polycarbonate plastics and hormonal waste byproducts from HRT and oral contraceptives. EGCG, from green tea, helps protect DNA from mutations. Selenium (natural form), co-enzyme Q₁₀ and vitamin D₃ protect and boost immune function and help prevent new cancer cells from forming and growing. TMG (trimethylglycine) and folic acid help the liver destroy environmental and hormonal carcinogens.

You should take one capsule twice daily of Breast Protection Formula™ if any one of these apply to you:

- Breast cancer runs in the family, or
- You drink more than one alcoholic beverage daily, or occasionally binge drink, or
- You are taking oral contraceptives, or have done so in the past five years, or
- If you are on HRT (hormone replacement therapy), or
- You eat tinned or canned foods, or
- You are overweight.

What protocol you should follow to reduce the risk of developing breast cancer:

Take one Breast Protection Formula™ capsule twice a day. Eat five or more servings of vegetables and fruits daily. Choose whole grain food instead of white flour and sugar. Limit meats that are high in fat, however, try to increase your consumption of oily fish to at least three times weekly (alternatively take two capsules of SOLAL's Fish Oil Extract Omega 3 or one Krill Oil [Neptune-NKO] Omega 3 capsule daily). Cut back on processed meats like hot dogs, cured (cold) meats and bacon. Limit yourself to no more than one alcoholic drink a day. Get some type of regular exercise, for approximately 40 minutes, at least three or four times a week.

Receive Vitamin D₃ FREE with every purchase of Fish Oil Extract Omega 3
