

Why does flu strike in winter?

Why, if there are germs all year round, do we get colds and flu mostly in winter? In fact, there are most germs during the summer months, since bacteria thrive on warmth.

The reason is our immune systems are suppressed by cold weather and we stay indoors more, closer to other people, breathing the same recycled germ-filled air.

Therefore the solution to not getting colds and flu is to stimulate your immune system **and** kill germs throughout winter.

Prescription antibiotics should be the very last resort, since they actually **weaken the immune system**, by **interfering with immune cell enzymes** and by **killing immune-supportive good bacteria** in the intestine. People easily get repeat colds and flu after the completion of an antibiotic because of antibiotic-induced immune system weakening. Antibiotics also increase the risk of developing or triggering allergies.

Relying on the **flu injection** is not adequate either. The flu injection offers protection against **3 strains of flu only**. In reality **we are exposed to hundreds of strains** of viruses, which constantly mutate and change their structure.

There are natural **anti-bacterial, anti-viral and immune boosting herbal extracts and nutrients** that can be used throughout the winter months, to kill germs *and* boost immune function. These are Olive leaf, Elderberry and Propolis, to kill viruses and bacteria; and Panax ginseng, Andrographis, Vitamin C and Zinc amino acid chelate to boost the immune system. Solal Technologies has incorporated all of these into a formulation specifically for adults and children who haven't got the time to get sick, miss work or school, or have their health damaged by colds and flu.

Unlike prescription antibiotics, The Natural Antibiotic and Flu Formula™ both kills germs *and* stimulates the immune system, making it ideal for use throughout winter. It protects, boosts resistance, and reduces the chance of developing colds and flu. It is especially important to use if people around you are starting to sniff and cough. Furthermore, if you do still develop a cold or flu, The Natural Antibiotic and Flu Formula™ will halve its duration and severity.

Extra Vitamin C is needed

To boost the immune system and fight colds, you need EXTRA vitamin C. This is especially important if you are stressed, overweight, smoke, drink alcohol or consume sugar, since these all deplete the body of vitamin C.

SOLAL Technologies is giving away a
free Double Vitamin C™
with every Natural Antibiotic and Flu formula™.

Double vitamin C is superior to other vitamin C formulations because it contains, not only the water soluble form of vitamin C, but also the fat soluble form, ascorbyl palmitate. This form penetrates the immune system cells better, and is up to **30 times more effective than conventional vitamin C**.

Available from SOLAL Technologies, Medical Practitioners, Dis-Chem Pharmacies and selected Pharmacies & Health Shops.
