

# SOLAL Technologies - The science of muscle growth

The days of brute force supplementation are over. No longer is it simply about packing in the protein and creatine or revving up the body with stimulants. For lean muscle growth and enhanced gym performance, supplements need to be scientifically engineered to work on a cellular bio-chemical and hormonal level. Solal Technologies has spent over ten years developing the first range of scientifically bio-engineered supplements to work on a cellular bio-molecular level.

- ① **Advanced-HGH™** Human Growth Hormone secretagogues. Advanced-HGH™ contains precursors that stimulate the pituitary gland to release growth hormone naturally. Growth hormone burns fat and builds muscle.
- ① **Pregnenolone** Non-prescription testosterone precursor. Testosterone is an anabolic hormone responsible for muscle growth.
- ① **Chrysin-X™** Blocks aromatase enzymes that convert testosterone into the fat making hormone, estrogen. This is especially important for overweight or older men, since these groups of men have higher levels of aromatase enzymes.
- ① **Stress Damage Control™** High stress jobs or over-exertion at the gym causes the body to release too much cortisol. Cortisol is a catabolic hormone that destroys muscle and causes fat gain. Cortisol also suppresses the levels of testosterone and growth hormone. Stress Damage Control™ contains Rosavin and Salidroside which prevent excessive cortisol release.
- ① **T2™ (di-iodo-thyronine)** Thyroid hormone precursor. T2 boosts metabolic rate and burns fat.
- ① **7-Keto™** Thermogenic hormone metabolite. Research shows that 7-keto burns fat and builds muscle.
- ① **Ribose** Ribose is an exercise enhancer that makes exercising easy. Reduced performance and exhaustion are not caused by lack of carbohydrates. They are caused by a reduced ability of the Krebs bio-chemical cycle to convert carbohydrates into energy. Ribose is the catalyst that ignites the spark that burns carbohydrates and releases energy.
- ① **Energising Adaptogens™** Boosts mental and physical energy levels. Improves memory, concentration and brain function. Increases oxygen and glucose supply to the muscles.
- ① **HCA with Chromium Polynicotinate™** Reduces carbohydrate craving and blocks the enzyme responsible for storing carbohydrates as fat. Increases the supply of glucose to the muscles for energy usage.
- ① **Invisible Fibre™** Invisible Fibre lowers the glycaemic index (GI) of any food by up to 50%. High glycaemic index foods (such as pasta, wine, bread, rice potatoes and sugar) cause the body to release two fat generating hormones, cortisol and insulin. Sprinkle Invisible Fibre™ onto any food or into any drink -or even stir into water and drink before each meal. It is tasteless, colourless and non-thickening.

**WHY SOLAL TECHNOLOGIES?** Read the "Why SOLAL" section on each label to find out what makes each SOLAL product better than competitors.

Available from Doctors, Dis-Chem, Leading Pharmacies, Health Shops and SOLAL Technologies.
