DIABETES

AGING

MOOD CHANGES
ANXIETY

Stress increases the risk of heart attack by 600%

(reference: Davis K. *Stressful deadlines boost heart attack risk*; New Scientist; 14/12/2004)

- ▶ Stress is a killer. It elevates two age-accelerating hormones, cortisol and adrenaline. These hormones not only damage the heart, but cause short-term memory loss, agitated work performance, insomnia and elevated blood pressure.
- ▶ **Stress Damage Control™** contains concentrated herbal extracts which protect the heart and brain from the damage caused by cortisol and adrenaline.

(reference: Maslova L.; *The cardioprotective and antiadrenergic activity of an extract of Rhodiola rosea in stress*; Eksp Clin Pharmacol.; 1994 Nov-Dec; 57(6):61-3).

- ▶ Most other products do not contain herbal extracts but rather weak herb powders, which have not been proven to provide the benefits demonstrated in clinical trials.

Visit SOLAL's Website to:

- ▶ **Read:** "What you don't know about stress can kill you" **and also to find out** "What Bill Clinton's doctors could have done to avoid his heart bypass."
- ▶ **View/download Solal "Product Information and Health Solutions Guide" for protocols on what to use for most medical conditions and product summaries**
- ▶ **View/download Solal chart titled "Correcting Pharmaceutical Induced Nutritional Deficiencies". If you are taking the contraceptive pill, pharmaceutical hormone replacement therapy or any other medication, these may be depleting your body of important nutrients.**
- ▶ **Download comprehensive product information & a pricelist of our full range of 200 nutraceuticals, dermaceuticals and bio-identical hormones for men and women.**
